

GSLs Workshop “Job Profiles and Career Options in the Pharmaceutical Industry”

with Dr. Petra Arndt

24th April 2018, 1:15am – 6pm, Seminar Room D15.00.047

The workshop

There are many different job options and professional roles in a typical pharmaceutical company. What are the opportunities for applicants in Life Science? The challenge is to find out who hires and what the entry-level job is called.

This workshop will explain, discuss, and train different job profiles along the pharmaceutical value chain. Participants will work with 'real' job descriptions published by Pharma (on their homepage or job search portals) to find out which working field could fit individually.

In advance to the seminar participants may prepare their CVs/professional profiles to reflect their experience and skills and send interesting job offers and/or questions to 'petra.arndt@outlook.com' **by 20th April**. The CVs will be discussed individually with the trainer prior to, during and after the seminar. Petra Arndt will schedule a time slot with you for April 24th after the receipt of your CV/job descriptions.

The trainer

Dr Petra Arndt is a coach and trainer focusing on career paths in natural science. She did her PhD in Biology at Würzburg University and has been working both in academia and the pharmaceutical industries as research scientist and project manager. She currently works as clinical project manager at Heidelberg University Hospital.
