

Patent Law in Natural Sciences and Technology

In today's global economy, innovation creates value. Companies as well as academic institutions have to simultaneously utilize and protect their developments.

This workshop introduces participants to the mechanisms of the patent system and familiarizes them with the basic terms.

Get to know how to handle new products and processes from the perception of an idea until you are ready to enter the market. Apply your new knowledge and protect or find weaknesses in example intellectual property from unauthorized imitation by competitors during case studies.

Workshop Style

This interactive training course will give doctoral students an in-depth understanding of German and European patent law with hands on material on patent prosecution, opposition and litigation.
